Question 8.2b - If you answered Other, give a brief description here:	Question 8.2c - If you answered No, please explain why. If Yes, comment here.	At
Identify partnerships/ incentivise improving soil health/ carbon capture/ biodiversity,etc		
	None of the above should impact on greenbelt land!	
Specific examples - cycling infrastructure, solar panels	Wirral's Climate Strategy objectives need more prominence	
	All new developments incorporate renewable energy, minimise car parking space and include sufficient, secure, covered cycle storage.	
Query re additional requirements on commercial, retail and leisure	Whilst we support the general principles that underpin this approach, we would expect that through the Examination that the "policy on" implications of this policy and a range of other policies have been properly tested. For example, approaches such as BREEAM may not necessarily represent the best metric to measure sustainable development and the latent opportunity to utilise a different metric. The Examination should rigorously test that the "policy on" implications have been assessed and consider how to proceed if it cannot be shown to result in no impact on the delivery of viable development in all parts of the District across the Plan period.

Question 8.2b - If you answered Other, give a brief description here:	Question 8.2c - If you answered No, please explain why. If Yes, comment here.	Att
	I would support this measure.	
	the chapter on Climate Change is just empty words and somewhat platitudinous especially if the Council	
	pursues spatial strategy options 2, as stated about the pursuit of these options will have an adverse impact on climate change. Therefore the harm caused by either of option 2 is fundamentally at odds with the stated objectives of the emerging Local Plan.	
	I would support this measure.	
	The HBF does not generally object to encouragement for the need to address climate change. However, the HBF support moving towards greater energy efficiency via a nationally consistent set of standards and a timetable for achieving any enhancements which is universally understood and technically implementable. The Government has consulted (ended on 7th February 2020) on The Future Homes Standard. The UK has set in law a target to bring all its greenhouse gas emission to net zero by 2050. New and existing homes account for 20% of emissions. It is the Government's intention to future proof new homes with low carbon heating and world-leading levels of energy efficiency. This consultation addressed: • options to uplift standards for Part L (Conservation of Fuel & Power) Building Regulations in 2020 and changes to Part F (Ventilation) Building Regulations. An increase in energy efficiency requirements for new homes in 2020 will be a meaningful and achievable stepping -stone to the Future Homes Standard in 2025. This is expected to be achieved through very high fabric standards and a low carbon heating system based on one of two options. The Governments preferred Option 2 proposes 31% reduction in carbon emissions compared to current standards (Approved Document L 2013) delivered by installation of carbon saving technology and better fabric standards. Both options increase costs for housebuilders (estimated costs between circa £2,557 - £4,847 per dwelling); • transitional arrangements to encourage quicker implementation; and • clarifying the role of Local Planning Authorities (LPA) in setting energy efficiency standards. The Government is proposing to remove the ability of LPAs to set higher energy efficiency standards than those in Building Regulations which has led to disparate standards across the country and inefficiencies in supply chains. The Government wants to create certainty and consistency. The situation is confusing with decisions about technical appropriateness, application and enforcement of energy stan	
	 installation of carbon saving technology and better fabric standards. Both options increase costs for housebuilders (estimated costs between circa £2,557 - £4,847 per dwelling); transitional arrangements to encourage quicker implementation; and clarifying the role of Local Planning Authorities (LPA) in setting energy efficiency standards. The Government is proposing to remove the ability of LPAs to set higher energy efficiency standards than those in Building Regulations which has led to disparate standards across the country and inefficiencies in supply chains. The Government wants to create certainty and consistency. The situation is confusing with decisions about technical appropriateness, application and enforcement of energy standards considered by planning officers, committees and Planning Inspectors rather than by qualified Building Inspectors. An uplift to Part L standards in 2020 will improve the energy efficiency of new homes and prepare housebuilders and supply chains in readiness for the further uplift in 2025 to meet the Future Homes Standard so there is no need for LPAs to seek higher standards. Future Engagement I trust that the Council will find these comments useful as they continue to progress the Local Plan. I would be happy to discuss these issues in greater detail or assist in facilitating discussions with the wider house building industry. The HBF would like to be kept informed of all forthcoming consultations upon the Local Plan and associated

Question 8.2b - If you answered Other, give a brief description here:	Question 8.2c - If you answered No, please explain why. If Yes, comment here.	At
	I would support this measure.	
	Provide more land to community food growing projects - we will certainly have to become more self sufficient in future, and this would be a step in the right direction, as well as being good for the environment	
	Establish a food recycling prgramme. Iam frustrated that this is not already in place, as I am sure many others are too	
	Require all new homes to be carbon neutral and that older homes be retro fitted to make them more energy efficient	
	 We should also be s giving over more land to community food growing purposes and food recycling purposes. All new housing built must be carbon zero. There must be retrofitting incentives to older homes to further reduce the carbon footprint. Added to this, the Council has also recognised that we have a 'Climate Emergency' and is committed to taking measures to address this situation. A Council Motion was passed unanimously stating that NO productive agricultural land will be released for development. The Local Plan Options fail to adhere to this commitment. The existing Green Belt is already making an important contribution towards tackling Climate Change, reducing harmful pollution and promoting health and well being through leisure activities and its attractiveness. And further measures will include: Increasing tree cover through large scale tree planting; Encouraging local food production, reducing unnecessary food miles; Creating and restoring flood plains, protecting homes and businesses from flooding; Improving wildlife habitats by creating and maintaining wildlife corridors, linking with urban parks and open spaces; Improving air quality, reducing high incidence of asthma; Providing further opportunities for recreation. 	
	 taking measures to address this situation. A Council Motion was passed unanimously stating that NO productive agricultural land will be released for development. The Local Plan Options fail to adhere to this commitment. The existing Green Belt is already making an important contribution towards tackling Climate Change, reducing harmful pollution and promoting health and well being through leisure activities and its attractiveness. And further measures will include: Increasing tree cover through large scale tree planting; Encouraging local food production, reducing unnecessary food miles; Creating and restoring flood plains, protecting homes and businesses from flooding; Improving wildlife habitats by creating and maintaining wildlife corridors, linking with urban parks and open spaces; Improving further opportunities for recreation. Older properties need to be retro-fitted to make them more environmentally friendly. New homes must be built without dependence on the national grid e.g. alternative heating such as air source/ground source. Solar panels on roofs should be compulsory. Older properties need to be retro-fitted to make them more environmentally friendly and more liveable. By making older properties fit for purpose there will be less need to sprawl outwards leaving derelict housing in the existing metropolitan centres, and a significant reduction in carbon footprint can be expected.

		Question 8.2 - Would you support including additional		Question 8.2b - If you answered							
Person ID	ID	measures within the Local Plan to plan for Climate Change?	support? (Please select)	Other, give a brief description here:	Question 8.2c - If you answered No, please explain why. If Yes, comment here.	Attachment 1	Attachment 2	Attachment 3	Attachment 4	Attachment 5	Attachment 6
1246762	LPIO-23689				New homes must be built without dependence on the national grid e.g. alternative heating such as air source/ground source. Solar panels on roofs should be compulsory. Wirral should aim to be a leader in green infrastructure, with better environmental targets for new housing than the legal minimum, building with the future of our planet firmly in mind. Infrastructure such as charging points for green cars, green electricity production and better insulation in all new build houses must be an absolute minimum, and developments design to reduce dependence on cars where possible.						
1242185	LPIO-23941				Yes. We appreciate there is only one planet, so the Local Plan ought to look after it.	https://wirral- consult.objective.co uk/file/5659121	https://wirral- consult.objective.co uk/file/5684263	https://wirral- consult.objective.co uk/file/5657006			
1248487	LPIO-24083				We would support the inclusion of a policy which requires all new residential developments to deliver high energy efficient standards. We are supportive of the Building for Life initiative as advocated in the Framework together with Homes England and the Design Council. Notwithstanding, any such requirements should be subject to viability testing so as to ensure the deliverability of development is not compromised.	https://wirral- consult.objective.co uk/file/5656330	https://wirral- consult.objective.co uk/file/5656329				
1248567	LPIO-24522				It is recognised that building stock is probably the largest single user of energy and therefore can make a significant contribution to cutting greenhouse gas emissions and assisting the Plan in working towards carbon neutral targets. With regards improving the energy efficiency of existing buildings, this will need to be applied with particular care in the case of historic buildings and those of traditional construction. Two principal areas of risk when upgrading older buildings is that such measures can cause unacceptable damage to their character and appearance and can also cause damage through technical conflicts between the exiting construction and changes to improve energy efficiency. This is reflected in Part L of The Building Regulations (2010), which contains some exemptions for historic buildings as well as circumstances where special considerations should apply. Historic England has produced an advice note which provides further information on this (https://historicengland.org.uk/images-books/publications/energy-efficiency-historic-buildings-ptl/heag014-energy-efficiency-partll/).						
1248571 (Cheshire West and Chester Council)	LPIO-24549				Renewable Energy: Cheshire West and Chester notes Wirral's intention to commission a Renewable Energy Study early in 2020. Our respective authorities have both declared 'Climate Emergencies' and it may be helpful to share information on the development of this piece of work and other initiatives, as both authorities develop a policy response to the climate emergency.						
1244826	LPIO-2464		 a) allocation sites for renewable energy; b) additional requirements on housing development; c) additional requirements on employment development; d) additional requirements on retail development; e) additional requirements on leisure development; f) tourism developments to meet higher standards of energy efficiency 								
1242697	LPIO-24713				Requirements must be according to legislation, as promoted by Government.	https://wirral- consult.objective.co uk/file/5659118	https://wirral- consult.objective.co uk/file/5659119	https://wirral- consult.objective.co uk/file/5659120	<u>https://wirral-</u> <u>consult.objective.co.</u> <u>uk/file/5659121</u>

1240932	LPIO-26627				Yes, we broadly support the inclusion of additional measures and are supportive of the objectives outlined in the draft of the new Wirral Climate Change Strategy. In particular, we welcome the Council's ambition to develop stronger partnerships and networks with key organisations and networks to provide coordinate action on climate change. However, positive, collaborative working with Wirral's largest landowners, is essential to addressing climate change. We wish to stress that there is a need to ensure plans and programmes are put into place with effective mechanisms to ensure delivery and monitoring for initiatives as well as the flexibility to change and adapt initiatives where necessary. Any initiatives such as allocating sites for renewable energy must be undertaken in a collaborative approach with major landowners. We are also mindful that initiatives such as additional requirements on housing, employment, retail, leisure and tourism developments to meet higher standards of energy efficiency will likely lead to increased development costs and as such may negatively impact the viability of allocated sites in the draft Local Plan. In particular, this would be the case for those urban brownfield regeneration schemes which the Council are relying heavily upon to meet its housing and employment land requirements which already demonstrate questionable viability.	https://wirral- consult.objective.co uk/file/5683689	https://wirral- consult.objective.co. uk/file/5682697	<u>https://wirral-</u> <u>consult.objective.co.</u> <u>uk/file/5682701</u>			
1245100	LPIO-2751	yes	 a) allocation sites for renewable energy; b) additional requirements on housing development; c) additional requirements on employment development; d) additional requirements on retail development; e) additional requirements on leisure development; f) tourism developments to meet higher standards of energy efficiency; g) Other (please state) 	Walking and cycling and green public transport must take precedence over the car. To this end car parking space must be minimised and safe, sufficient and secure cycle storage must be provided.	between key facilities, minimise car parking space and included sufficient, secure and covered cycle storage.						
1245180	LPIO-2761	yes									
1245058	LPIO-2811	yes	a) allocation sites for renewable energy; g) Other (please state)	for e.g. an insistence that all new developments incorporate renewable energy, minimise car parking space and include sufficient, secure, covered cycle storage.							
1248546 (Wirral Wildlife)	LPIO-2877	yes	 a) allocation sites for renewable energy; b) additional requirements on housing development; c) additional requirements on employment development; d) additional requirements on retail development; e) additional requirements on leisure development; f) tourism developments to meet higher standards of energy efficiency; g) Other (please state) 	Sites to absorb carbon, whether into wetlands, trees or well-managed grassland.	To meet carbon budgets and avoid expensive improvements in the near future, all new development must be designed to be as low carbon as possible in construction, and, critically, zero-carbon in use. Technology to do this is now readily available and has become much cheaper in the last few years. While there may be a small increased cost of construction, this is offset by much cheaper running costs in use, which will particularly benefit the poorer members of society. A project in Liverpool building social housing (Liverpool Community Homes/Abundance/Octavo) expects that each house will have its energy consumption cut by up to 93% compared to the UK average, saving households about £1,200 a year. There is no excuse for new developments not to be built to these standards, and we must do so to tackle climate change. We also need to set aside land to absorb carbon, to achieve climate change targets.						
1245159	LPIO-3067	yes						[
1245287	LPIO-3165	yes	 a) allocation sites for renewable energy; c) additional requirements on employment development; f) tourism developments to meet higher standards of energy efficiency 		Providing safe walking and cycling across the Wirral

Question 8.2b - If you answered Other, give a brief description here:	Question 8.2c - If you answered No, please explain why. If Yes, comment here.	At
	We already are surrounded by wind farms, visible from West Kirby on pretty much every way we look - so additional renewable energy, if Wind Farms around West Kirby/Hoylake/Moreton/New Brighton, would be unreasonable. Alternative renewable energy facilities would be more acceptable. Making sure that new housing/business/retail is as energy efficient as possible, using the latest heating (and air conditioning) approaches to reduce CO2, etc. is a sensible use of planning controls - as long as it does not completely halt the building needed in all of these area.	
	I would support this measure.	
	 Don't build on the Greenbelt Fully insluate all new and existing homes, from top to bottom. Use solar energy to power all homes and commercial premises (offices etc). 	
To fully consider the impact on pollution of any development in formerly green belt areas	Most of West Wirral has limited public transport (odd bus route but very little train network) so any housing development in these areas would likely heavily rely on cars. With limited employment opportunities in that area car usage will be great with consequent impact on air pollution/particulates. Increased housing would also put pressure on drainage systems potentially increasing the risk of flooding in the area. Furthermore any land given up to housing development in this area would probably have been previously used for farming thereby reducing further the peninsula's ability to achieve carbon neutrality. As a result of this I think that any development in these areas should be limited in scale.	
The funding of any additions needs to be carefully considerd to ensure measures remain viable

	YES for e.g. an insistence that all new developments incorporate renewable energy, minimise car parking space and include sufficient, secure, covered cycle storage. Any decision needs to take the climate emergency into account.	
	YES for e.g. an insistence that all new developments incorporate renewable energy, minimise car parking space and include sufficient, secure, covered cycle storage. Waste:?Local?plan?to Adopt?policies?that?prioritise?circular?economy,?promote?community?sharing?	
	Yes We would support allocating additional sites to develop renewable energy and to include additional requirements on housing, employment, retail development etc. to meet the highest standards of energy efficiency. On housing we would like to see solar panels, electric charging points for cars, greywater plumbing system etc. as standard. For employment areas, retail, leisure and tourism we would like to see solar panels and electric charging points.	
	ITPAS supports the Council's endeavour as clarified in our comments in answer to Q8.1. The additional capital cost of such measures should be recouped through lower lifetime running costs. The task is how to prevent the issue of viability at the initial capital cost stage being allowed to water down this approach. This might be facilitated by arrangements between developers, mortgage companies, utility firms and agents; or more simply by companies offering mortgages which cover energy costs – do they exist already?

	for e.g. an insistence that all new developments incorporate renewable energy, minimise car parking space and include sufficient, secure, covered cycle storage.			
	Yes, we must do a lot more to tackle climate change effectively. I would support all measures listed above and any more you can think of! Please see the attached document from Friends of the Earth. Overall little direct reference to the Local Plan in Wirral –general issues addressed only–this is a general briefing that has been produced by Friends of the Earth (?) with generic recommendations –no reference specifically to Wirral or the Local Plan. Only reference to Local Plan –very generic–not Wirral specific: -Most local authorities also have to develop Local Plans. District authorities produce local plans for housing and other development while County authorities produce local plans for minerals (including fossil fuel energy extraction) and wasteLocal plans are very significant indeed. They influence land-use and development within areas, including housing, transport and energyThe ability of local authorities to fully control developments has however diminished over several governments as planning has been deregulated (e.g. permitted development for conversion of office buildings to residential use), centralised, or targets imposed on local authorities (e.g. housing)Local plans need to be compliant with the National Planning Policy Framework (NPFF)-The NPPF in England is weak in a number of areas (for example on urban sprawl) but it does require local plans to "help to: shape places in ways that contribute to radical reductions in greenhouse gas emissions, minimise vulnerability and improve resilience and support renewable and low carbon energy and associated infrastructure. We should have an insistence that all new developments incorporate renewable energy, minimise car parking space and include sufficient, secure, covered cycle storage.	https://wirral- consult.objective.co. uk/file/5656353		
 Replace bus fleet with electric vehicles; Require all new-build properties to incorporate solar roof panels; Insulate all new-build properties to the highest international standard; Bring insulation standards of all domestic dwellings to highest international standard.

Person ID	ID	Would you support including additional measures within the Local Plan to plan for Climate Change?		Question 8.2b - If you answered Other, give a brief description here:	Question 8.2c - If you answered No, please explain why. If Yes, comment here.	Attachment 1	Attachment 2	Attachment 3	Attachment 4	Attachment 5	Attachment 6
1246488	LPIO-7266	yes									
1246348	LPIO-7346	no	b) additional requirements on housing development; c) additional requirements on employment development;		As long as council maintains the 12,000 house figure when we know they would like to build on green belt, I can't take their climate change position seriously. Can they turn those big arc lights off at Pensby School when no one is playing for a start.						
1241025	LPIO-7366	yes									
1246556	LPIO-7464		 a) allocation sites for renewable energy; b) additional requirements on housing development; c) additional requirements on employment development; d) additional requirements on retail development; e) additional requirements on leisure development; f) tourism developments to meet higher standards of energy efficiency; 								
1240932	LPIO-7625	yes	 a) allocation sites for renewable energy; b) additional requirements on housing development; c) additional requirements on employment development; d) additional requirements on retail development; e) additional requirements on leisure development; f) tourism developments to meet higher standards of energy efficiency; 		Yes, Our Client broadly supports the Council's climate change initiatives and the objectives outlined in the draft of the new Wirral Climate Change Strategy. In particular, Our Client welcomes the Council's ambition to develop stronger partnerships and networks with key organisations and networks to provide coordinated action on climate change. However, Our Client wishes to stress that there is a need to ensure plans and programmes are put into place with effective mechanisms to ensure delivery and monitoring for initiatives as well as the flexibility to change and adapt initiatives where necessary. Any initiatives such as allocating sites for renewable energy must be undertaken in a collaborative approach with major landowners, such as Our Client. Our Client is also mindful that initiatives such as additional requirements on housing, employment, retail, leisure and tourism developments to meet higher standards of energy efficiency will likely lead to increased development costs and as such may negatively impact the viability of allocated sites in the draft Local Plan. In particular, this would be the case for those urban brownfield regeneration schemes which the Council are relying heavily upon to meet its housing and employment land requirements whilst already questioning the viability of these sites in the Issues and Options document.	https://wirral- consult.objective.co uk/file/5683689	https://wirral- consult.objective.co. uk/file/5682697	https://wirral- consult.objective.co. uk/file/5682701

Question 8.2b - If you answered Other, give a brief description here:	Question 8.2c - If you answered No, please explain why. If Yes, comment here.	At
Planting Kelp beds offshore		
Detailed design and practical guides to incorporate climate change requirements into new development should be set out as supplementary planning guidance		
	I would suggest a requirement for PV cells to be installed on all new residential, commercial and retail developments. United Utilities should be asked to develop plans for electricity generation from waste treatment plants.	
	No, this has to be about reduction in any form of development and protection of our natural assets I.e. greenbelt, and greenspaces. Greenbelt should be increased not decreased. Objective must be to increase our greenbelt percentage over the local plan period.	
	There should be an insistence that all new developments of whatever kind incorporate renewable energy, minimise car parking space and includes sufficient secure covered cycle storage.

Question 8.2b - If you answered Other, give a brief description here:	Question 8.2c - If you answered No, please explain why. If Yes, comment here.	Ati
	I would support these measures. All future development needs to be "zero carbon in use". We have the technology and it will benefit everyone especially those of limited means	
Four times every single day without fail, an enormous volume of water is moved by the moon - the tide. If this infinite, vast source of energy could be enhanced by tidal power generators in the river Mersey we would have access to an unlimited power supply. Wirral should work with the Liverpool region to tap this wonderful, natural and eternal power supply.	I would not like to see acres of fields covered in solar panels or wind farms, however roof tops and the sides of buildings could be used for solar panels.	
	The purpose of our Client's Local Plan Issues and Options submission is to provide evidence to demonstrate how land to the north and south of Hind Street, as defined by figure 1, can be redeveloped to achieve a strategic mixed-use site that is of a scale to make a significant contribution to meeting the Council's housing requirement and the positive regeneration of Birkenhead Town Centre. It is our Client's opinion that it is only when the whole of the Hind Street strategic mixed site is considered that a scale of development can be realised that will meet the aspirations of the Council to create an Urban Garden City or Left Bank-Regeneration Zone. Maximising the full extent of the Strategic Mixed Site will create a quantum of land that will also provide the Council with the opportunity to accelerate the delivery of new homes and commercial space and the positive redevelopment of a prominent edge of centre brownfield site that will create a compact walkable and cyclable neighbourhood with access to several public transport options. It is only at this scale of development that effective and efficient ways to directly address Climate Change objectives and targets can be achieved. Our Client's Vision Document that is appended to this document identifies the ambitious Climate Change targets that the Liverpool City Region Combined Authority has set, particularly to become Zero Carbon by 2040, ten years earlier than the national target. DUE TO THE WORD LIMIT, A DETAILED RESPONSE TO THIS QUESTION HAS BEEN PROVIDED WITHIN THE REPRESENTATIONS DOCUMENT SUBMITTED AS PART OF QUESTION 10.1.	
	Also, for strategic enabling policies to support retrofit for existing buildings, improved sustainability and biodiversity for listed landscapes, and sustainable improvements to the public realm. Works to a heritage asset to address climate change policy Wirral Council is committed to tackling climate change and reducing carbon emissions. At the same time, the Council is committed to conserving and enhancing its heritage assets. The Council's aim, therefore, is to ensure a balanced approach between protecting the heritage assets of Wirral and ensuring that they contribute to tackling climate change and reducing the carbon emissions of the Borough	<u>http</u> <u>con</u> <u>uk/</u> 1
